

To whom it may concern,

I am looking for a frontend/backend developer position. I specialise in MERN stack and also, I can code a backend part as well.

Why Me?

I'm a passionate learner and I love being a part of team where I can grow into a better dev and also a better communicator. I'm confident in myself and my code that I type in. I never fear to ask any questions and being a dumb for a second. I'd love to feel being supported and I'll provide the better work routine. My mental and physical health matters to me and I try to pay attention to them as well. I don't forget to learn more in my free time for my own projects and read relevant tech news in Twitter or Blogs. I don't like letting my team down and being a person that holds up a project.

Here are my projects :

1. **Disney App Clone:**
<https://mili-disney-plus.web.app>
<https://github.com/milimynname/mili-disney-clone>
2. **Hiking booking app with JS, Mongo DB and Express**
<https://mili-natours.herokuapp.com/>
<https://github.com/milimynname/mili-natours-course>
3. **Recipe App with JS**
<https://forkify-milimynname.netlify.app/>
<https://github.com/milimynname/forkify-course-video>
4. **Todo App with JS and SCSS**
<https://mili-todo.netlify.app>
<https://github.com/milimynname/mili-todo>
5. **Feedback App with JS, Webpack and SCSS**
<https://mili-feedback.netlify.app/>
<https://github.com/milimynname/mili-feedback>

Thank you for reviewing my application. If you have any other suggestions for me, please let me know.

Yours sincerely
Komiljon Maksudov
